# AKP Wireless and RANlytics Scandinavia announcing strategic partnership for walk and drive testing in Poland

4<sup>th</sup> August, 2020  
Announcement

AKP Wireless has selected RANlytics as its preferred vendor and strategic partner for walk testing, drive testing and saturation RF testing.

**Copenhagen, 4<sup>th</sup> August 2020.** RANlytics Scandinavia today announced a strategic partnership with AKP Wireless, the leading experts for indoor wireless coverage solutions in Poland. By using RANlytics's unique RF testing technologies and post processing approach AKP will be able to serve its customers' needs faster, and perform much more detailed and accurate RF testing and analysis more cost effectively than is possible with any legacy testing system.

Collecting mobile RF data at scale and at speed has always been problematic as legacy testing systems are complex and expensive, and difficult if not impossible to scale to meet the rapidly growing needs of operators and enterprise customers. RANlytics's revolutionary new approach has eliminated these constraints for the first time to support complete testing of every available band on a single walk or drive-testing pass, and to do so at lower cost than has ever before been possible.

Fully automated post processing and walk test report generation is another industry first introduced by RANlytics; as is immediate access by both technical and non-technical users to all RF drive test data ever recorded – making time based change analysis easy for the first time. RANlytics complements the best walk and drive test data available with intuitive and powerful data visualisation, reporting and analysis tools that enable customers to extract more value from RF testing than has ever been possible. All at the lowest per-unit costs in the industry.

*“By using RANlytics for our walk and drive testing we are now able to offer our customers better, faster and more accurate testing than with any other solution in the market. RF testing and generating reports is now affordable at a much wider scale.”* says Krzysztof Nowiński, co-founder of AKP Wireless. *“Enterprise customers, mobile operators, regulatory agencies and many other customers in Poland will benefit from this strategic partnership as RF testing will become so much more effective and affordable.”*

*“RANlytics is pleased to partner with AKP Wireless – another market leader – to help to drive our aggressive growth and expansion plan in EMEA.”* explained Markus Walter, RANlytics’s SVP EMEA. *“We are providing AKP with the best in class and most cost effective technology suite to capture and process RF mobile data. Our solutions support all mobile technologies, from 2G to 4G, with 5G coming soon, in line with operators launching more services more quickly than ever before, while they continuously strive to lower their costs.”*
